

Football is the only relaxation from all sort stress , anxiety and depression , I have played in hard grounds for many years but it's for the first time that I have been to Turf to play my fav sport that is Football. Playing on Turf is way too much awesome and next level of happiness and joy. It was safe as well as it consist of artificial grass covered with nets along the four sides of it. Of course , for playing it costs some amount of money but according to my concern it's really worth paying. I would recommend the turf of Orlem which is in Malad West coz the charges are less here comparing it with the other turfs and the grass here are really the best I can say. My experience was indeed really good playing football in turf, Hope you too visit any of turf soon.

THANK YOU!!

a) Describe Open source software with example.

Ans: Open-source software (OSS) is any computer software that's distributed with its source code available for modification. That means it usually includes a license for programmers to change the software in any way they choose: They can fix bugs, improve functions, or adapt the software to suit their own needs.

Prime examples of open-source products are the Apache HTTP Server, the e-commerce platform os Commerce, internet browsers Mozilla Firefox and Chromium (the project where the vast majority of development of the freeware Google Chrome is done) and the full office suite LibreOffice.

A horizontal toolbar for a rich text editor, containing icons for undo, redo, bold, italic, underline, text color, background color, link, unlink, list, and other formatting options.**b) Describe Free Software with Example**

Ans: “Free software” means software that respects users' freedom and community. Roughly, it means that the users have the freedom to run, copy, distribute, study, change and improve the software. Thus, “free software” is a matter of liberty, not price. To understand the concept, you should think of “free” as in “free speech,” not as in “free beer.” We sometimes call it “libre software,” borrowing the French or Spanish word for “free” as in freedom, to show we do not mean the software is gratis.

The Free Software Directory maintains a large database of free-software packages. Some of the best-known examples include the Linux kernel, the BSD and Linux operating systems, the GNU Compiler Collection and C library; the MySQL relational database; the Apache web server; and the Sendmail mail transport agent.

c) Difference between Free and Open-Source Software.
